

P2020

Performance Chassis for Tamiya TA05

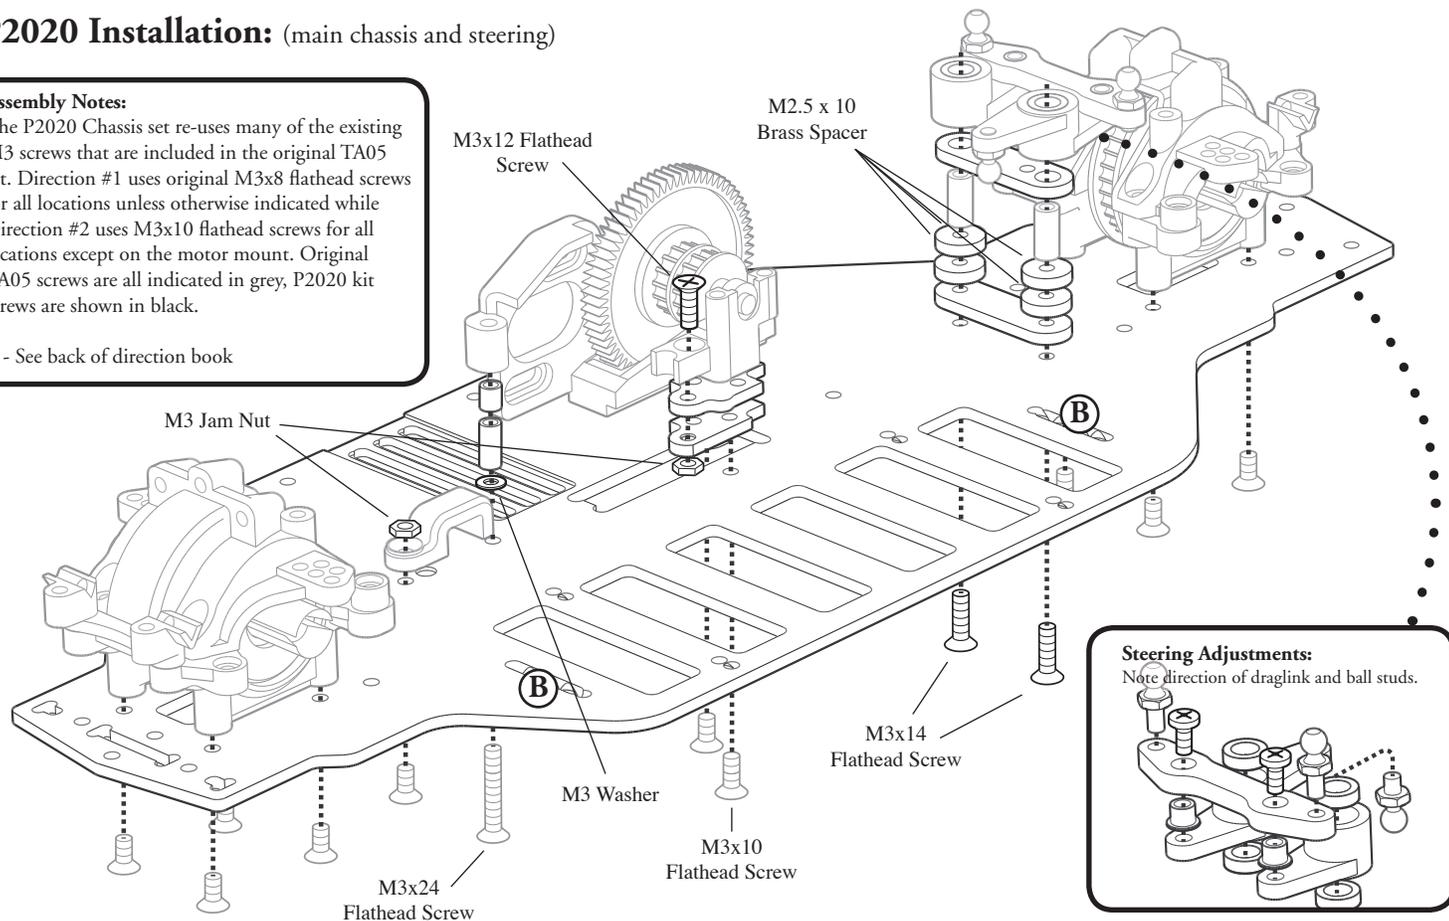

P2020
Advanced Performance
Continuing to push the performance envelope.

1 P2020 Installation: (main chassis and steering)

Assembly Notes:

The P2020 Chassis set re-uses many of the existing M3 screws that are included in the original TA05 kit. Direction #1 uses original M3x8 flathead screws for all locations unless otherwise indicated while Direction #2 uses M3x10 flathead screws for all locations except on the motor mount. Original TA05 screws are all indicated in grey, P2020 kit screws are shown in black.

B - See back of direction book

Shaded Images are existing parts

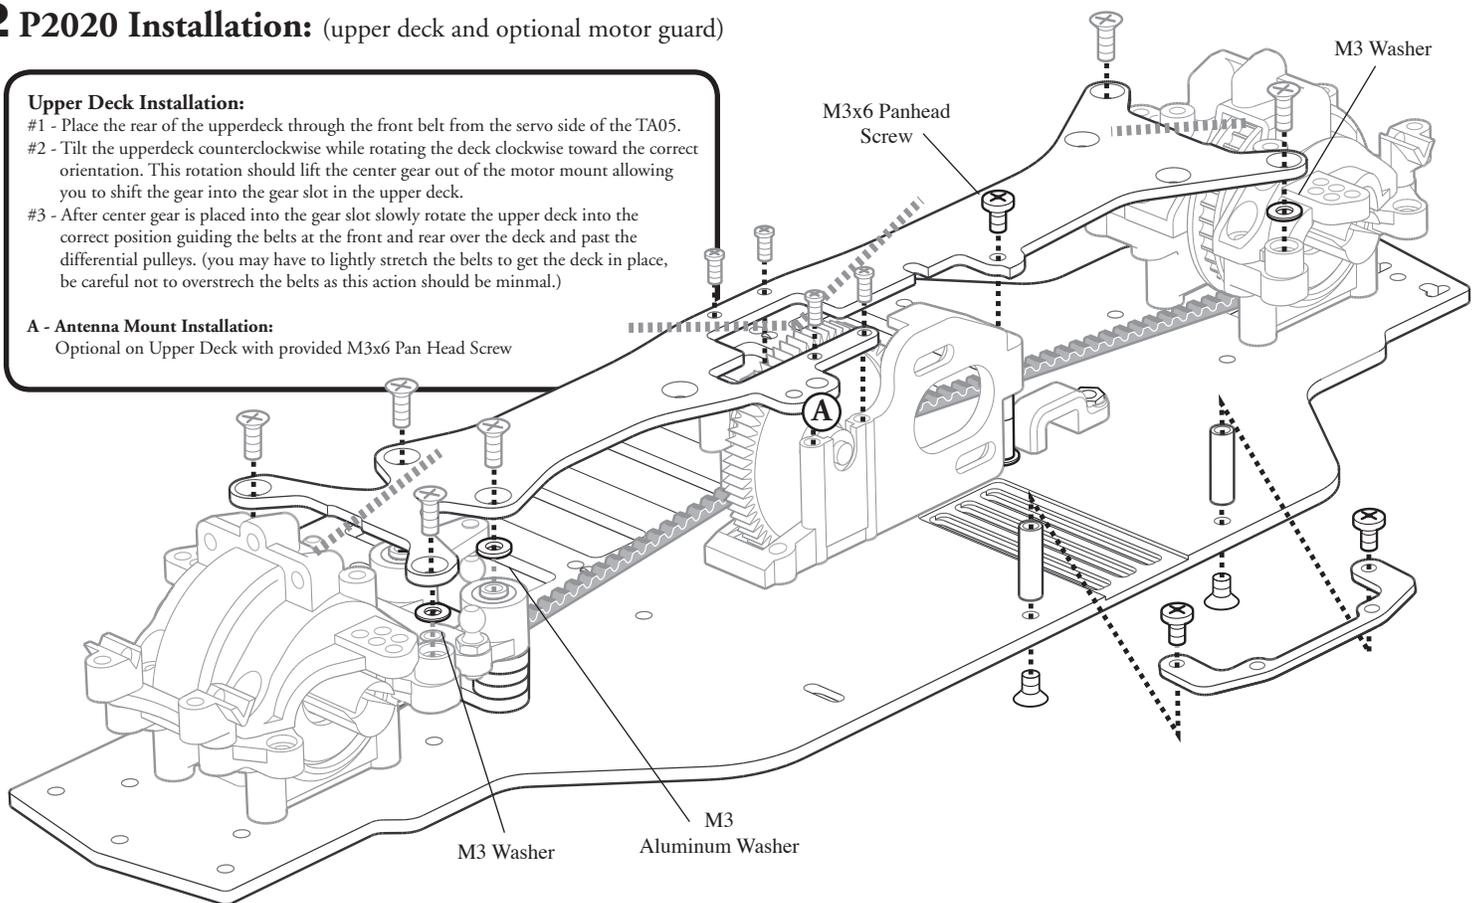

2 P2020 Installation: (upper deck and optional motor guard)

Upper Deck Installation:

- #1 - Place the rear of the upperdeck through the front belt from the servo side of the TA05.
- #2 - Tilt the upperdeck counterclockwise while rotating the deck clockwise toward the correct orientation. This rotation should lift the center gear out of the motor mount allowing you to shift the gear into the gear slot in the upper deck.
- #3 - After center gear is placed into the gear slot slowly rotate the upper deck into the correct position guiding the belts at the front and rear over the deck and past the differential pulleys. (you may have to lightly stretch the belts to get the deck in place, be careful not to overstretch the belts as this action should be minimal.)

A - Antenna Mount Installation:

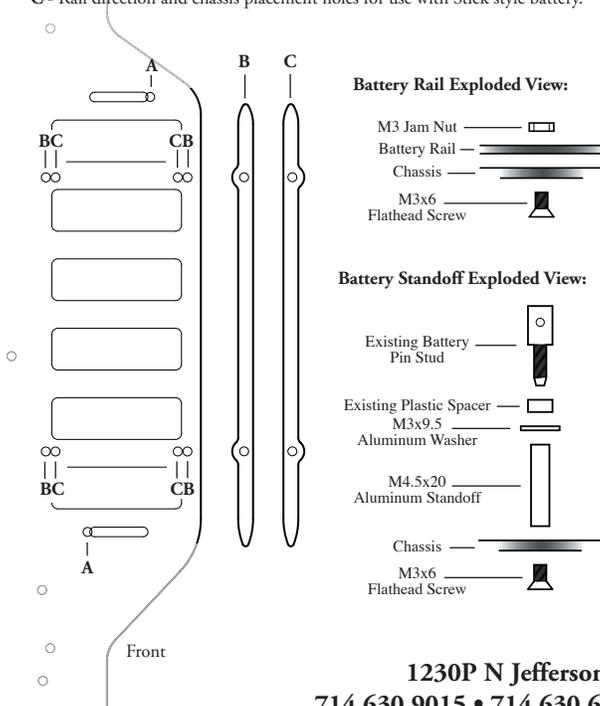

Optional on Upper Deck with provided M3x6 Pan Head Screw

Shaded Images are existing parts

B Battery Installation Information:

- A - Battery Bar stand-off location for use with stock TA05 battery bar.
 B - Rail direction and chassis placement holes for use with LTO style battery.
 C - Rail direction and chassis placement holes for use with Stick style battery.
